Body

Implementation Plan: [FEATURE]

Branch: `[###-feature-name]` | **Date**: [DATE] | **Spec**: [link] **Input**: Feature specification from `/specs/[###-feature-name]/spec.md` **Note**: This template is filled in by the `speckit.plan` command. See `.specify/templates/plan-template.md` for the execution workflow.

Summary

[Extract from feature spec: primary requirement + technical approach from research]

Technical Context

Language/Version: [e.g., Python 3.11, Swift 5.9, Rust 1.75 or NEEDS CLARIFICATION]

Primary Dependencies: [e.g., FastAPI, UIKit, LLVM or NEEDS CLARIFICATION]

Storage: [if applicable, e.g., PostgreSQL, CoreData, files or N/A] **Testing**: [e.g., pytest,

XCTest, cargo test or NEEDS CLARIFICATION] ****Target Platform****: [e.g., Linux server, iOS 15+, WASM or NEEDS CLARIFICATION] ****Project Type****: [e.g., library/cli/web-service/mobile-app/compiler/desktop-app or NEEDS CLARIFICATION] ****Performance Goals****: [domain-specific, e.g., 1000 req/s, 10k lines/sec, 60 fps or NEEDS CLARIFICATION] ****Constraints****: [domain-specific, e.g., <200ms p95, <100MB memory, offline-capable or NEEDS CLARIFICATION] ****Scale/Scope****: [domain-specific, e.g., 10k users, 1M LOC, 50 screens or NEEDS CLARIFICATION]

Constitution Check

GATE: Must pass before Phase 0 research. Re-check after Phase 1 design. - The plan MUST stay within the Spec Kit-side extension, backend/API, pipeline, and Docker/Postgres scope for this feature. - The plan MUST preserve the zero-config agent-native path; no separate AI provider configuration is allowed for the primary flow. - The plan MUST NOT introduce frontend work, ticket-board/Kanban functionality, or other non-goal scope. - Any proposed work outside these bounds requires a constitution amendment before implementation begins.

Project Structure

Documentation (this feature)

```
```text specs/[####-feature]/ ■■■■ plan.md # This file (/speckit.plan command output) ■■■■
research.md # Phase 0 output (/speckit.plan command) ■■■■ data-model.md # Phase 1
output (/speckit.plan command) ■■■■ quickstart.md # Phase 1 output (/speckit.plan
command) ■■■■ contracts/ # Phase 1 output (/speckit.plan command) ■■■■ tasks.md #
Phase 2 output (/speckit.tasks command - NOT created by /speckit.plan) ```
```

### ***Source Code (repository root)***

```
```text
```

[REMOVE IF UNUSED] Option 1: Single project (DEFAULT)

```
src/ ■■■■ models/ ■■■■ services/ ■■■■ cli/ ■■■■ lib/ tests/ ■■■■ contract/ ■■■■ integration/
■■■■ unit/
```

[REMOVE IF UNUSED] Option 2: Web application (when "frontend" + "backend" detected)

```
backend/ ■■■■ src/ ■ ■■■■ models/ ■ ■■■■ services/ ■ ■■■■ api/ ■■■■ tests/ frontend/ ■■■■
src/ ■ ■■■■ components/ ■ ■■■■ pages/ ■ ■■■■ services/ ■■■■ tests/
```

[REMOVE IF UNUSED] Option 3: Mobile + API (when "iOS/Android" detected)

api/ ■■■■ [same as backend above] ios/ or android/ ■■■■ [platform-specific structure: feature modules, UI flows, platform tests] ``` **Structure Decision**: [Document the selected structure and reference the real directories captured above]

Complexity Tracking

> **Fill ONLY if Constitution Check has violations that must be justified** | Violation | Why Needed | Simpler Alternative Rejected Because |
|-----|-----|-----| | [e.g., 4th project] | [current need] | [why 3 projects insufficient] | | [e.g., Repository pattern] | [specific problem] | [why direct DB access insufficient] |
