Body

Feature Specification: [FEATURE NAME]

Feature Branch: `[###-feature-name]` **Created**: [DATE] **Status**: Draft **Input**: User description: "\$ARGUMENTS"

User Scenarios & Testing **(mandatory)**

> Constitutional constraints for this feature: the implementation **MUST** remain within the Spec Kit-side extension/backend/pipeline scope, preserve the zero-config agent-native path, and avoid the listed non-goals such as frontend work and unrelated product features.

User Story 1 - [Brief Title] (Priority: P1)

[Describe this user journey in plain language] **Why this priority**: [Explain the value and why it has this priority level] **Independent Test**: [Describe how this can be tested independently]

- e.g., "Can be fully tested by [specific action] and delivers [specific value]" ****Acceptance Scenarios****: 1. ****Given**** [initial state], ****When**** [action], ****Then**** [expected outcome] 2. ****Given**** [initial state], ****When**** [action], ****Then**** [expected outcome] ---

User Story 2 - [Brief Title] (Priority: P2)

[Describe this user journey in plain language] ****Why this priority****: [Explain the value and why it has this priority level] ****Independent Test****: [Describe how this can be tested independently] ****Acceptance Scenarios****: 1. ****Given**** [initial state], ****When**** [action], ****Then**** [expected outcome] ---

User Story 3 - [Brief Title] (Priority: P3)

[Describe this user journey in plain language] ****Why this priority****: [Explain the value and why it has this priority level] ****Independent Test****: [Describe how this can be tested independently] ****Acceptance Scenarios****: 1. ****Given**** [initial state], ****When**** [action], ****Then**** [expected outcome] --- [Add more user stories as needed, each with an assigned priority]

Edge Cases

- What happens when [boundary condition]? - How does system handle [error scenario]?

Requirements *(mandatory)*

Functional Requirements

- ****FR-001****: System MUST [specific capability, e.g., "allow users to create accounts"] - ****FR-002****: System MUST [specific capability, e.g., "validate email addresses"] - ****FR-003****: Users MUST be able to [key interaction, e.g., "reset their password"] - ****FR-004****: System MUST [data requirement, e.g., "persist user preferences"] - ****FR-005****: System MUST [behavior, e.g., "log all security events"] *Example of marking unclear requirements:* - ****FR-006****: System MUST authenticate users via [NEEDS CLARIFICATION: auth method not specified - email/password, SSO, OAuth?] - ****FR-007****: System MUST retain user data for [NEEDS CLARIFICATION: retention period not specified]

Key Entities *(include if feature involves data)*

- ****[Entity 1]****: [What it represents, key attributes without implementation] - ****[Entity 2]****: [What it represents, relationships to other entities]

Success Criteria *(mandatory)*

Measurable Outcomes

- **SC-001**: [Measurable metric, e.g., "Users can complete account creation in under 2 minutes"] - **SC-002**: [Measurable metric, e.g., "System handles 1000 concurrent users without degradation"] - **SC-003**: [User satisfaction metric, e.g., "90% of users successfully complete primary task on first attempt"] - **SC-004**: [Business metric, e.g., "Reduce support tickets related to [X] by 50%"]

Assumptions

- [Assumption about target users, e.g., "Users have stable internet connectivity"] -
[Assumption about scope boundaries, e.g., "Mobile support is out of scope for v1"] -
[Assumption about data/environment, e.g., "Existing authentication system will be reused"] -
[Dependency on existing system/service, e.g., "Requires access to the existing user profile API"]
